### What is NGST?

The *New Group Spelling Test* is a spelling test comprising three forms (A, B and C) to support termly testing for students aged between 6 and 14+. The test has two sections: a single word section and a spelling in context section.

The test is **adaptive**; each student's performance is assessed as they complete the test and the questions are adapted to be in line with the ability they demonstrate. This is a benefit, particularly to students with a low spelling attainment as they can be tested with words at a lower level than that determined by age, and for students with high spelling attainment as they can be tested with words that better reflect their skills.

The following report reflects the results of each section of the test administered. Standard Age Scores reflect the age of the student and the difficulty level of the test questions attempted.

### Why use NGST to track progress?

- *NGST* is a time-efficient and accurate test of a student's spelling ability that can be administered year-to-year or term-to-term to track progress.
- If students have been given a targeted intervention for spelling, *NGST* can be used to measure progress over a short time, for example, over three or six months.
- Forms A, B and C can be used so that students are tested with different but equivalent material at the second and third point of testing.
- Patterns of scores that represent significant progress or significant lack of progression are set out clearly for easy access.

Please note that significance will vary depending on the student's baseline score; that is the score from the first test. Small changes to scores that are close to the mean (SAS 100) will be significant whereas bigger changes will be needed to scores at the very low and very high end of the range to indicate a significant improvement or lack of progress.

To make this report as straightforward as possible, five categories have been used to describe progress: much lower than expected, lower than expected, expected, higher than expected and much higher than expected.

This report will show data for three test points. If a student has been tested once only they will not appear in this report. A separate report is available for two test points.

### What is the Spelling Ability Scale?

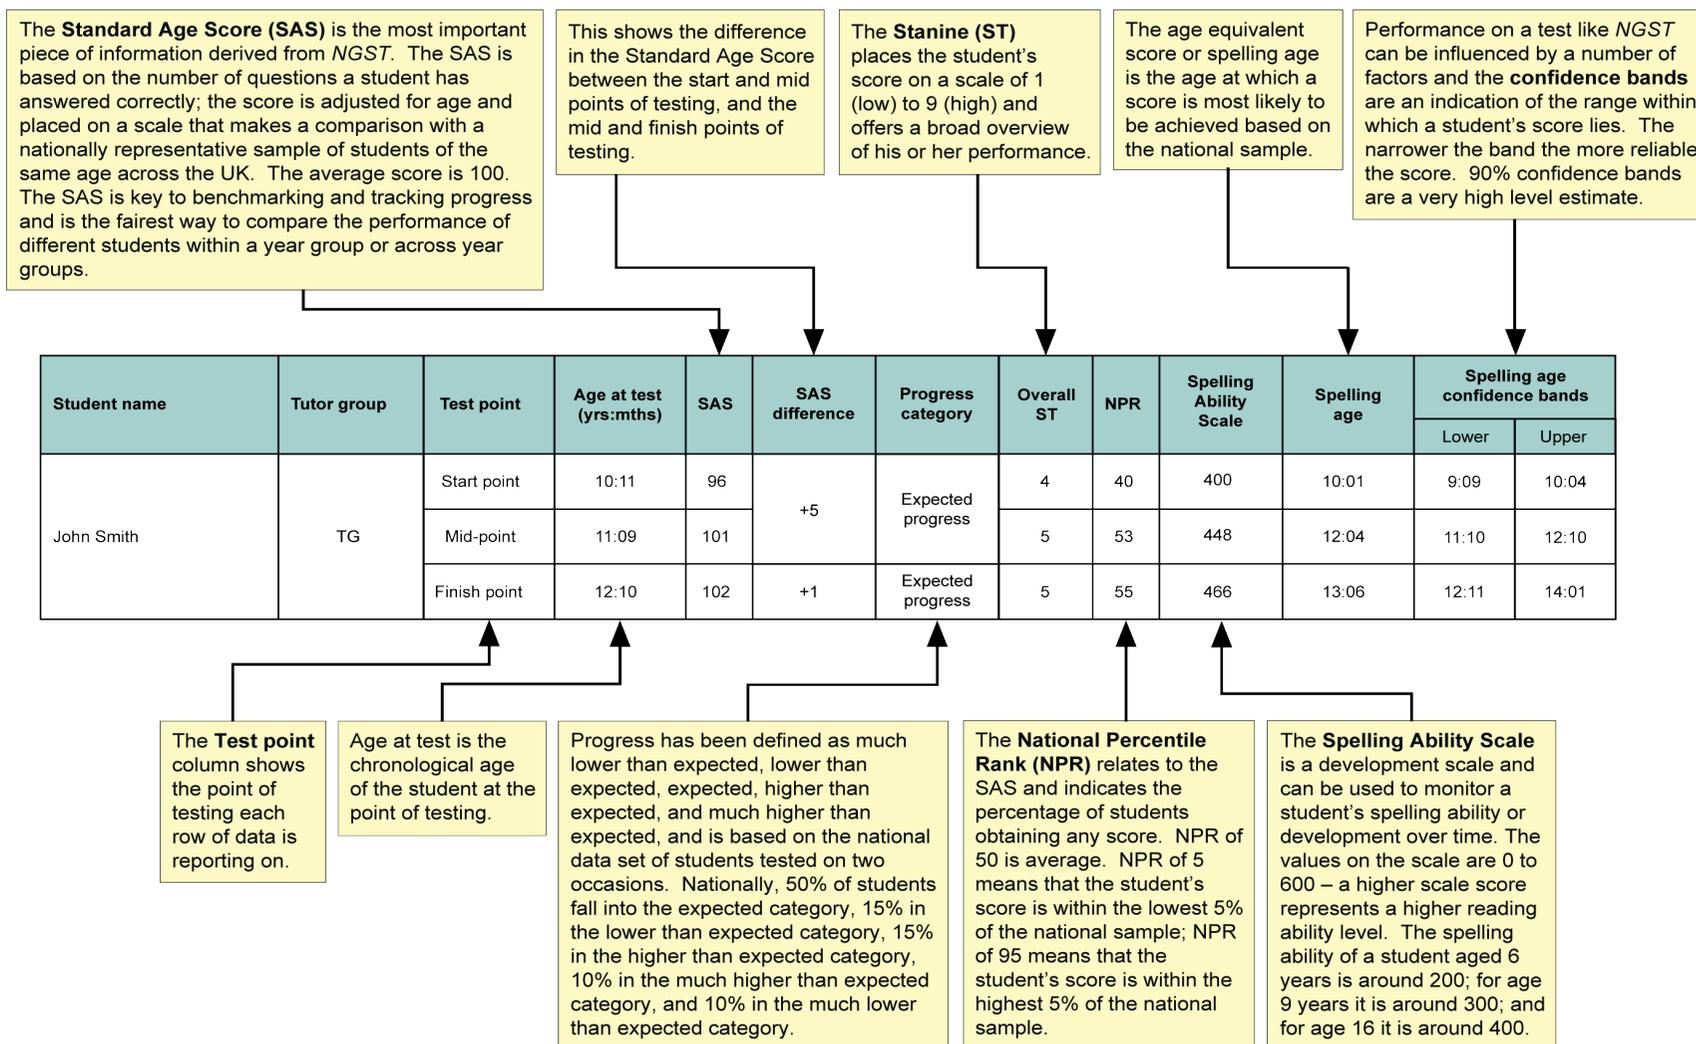

The Spelling Ability Scale is a development scale and can be used to monitor a student's spelling ability or development over time. The scale used in *NGST* is specific to the test, is arbitrary and has been set from zero to 600; it gives you another measure for your students' progress.

## Overall progress

The NGST SAS scores are shown on the scatter chart for two administration points. The comparison is between the start and finish points.

Students making expected progress are in the white band; students making lower than expected progress are in the light orange band; students making much lower than expected progress are in the dark orange band; students making higher than expected progress are in the light green band; students making much higher than expected progress are in the dark green band.

- Lower than expected progress
- Much lower than expected progress
- Males
- Females

The table below shows the number of students in each progress category against the national distribution, between the start and finish points. The second table shows the mean SAS for each point of testing. The mean SAS difference is between the start and finish points.

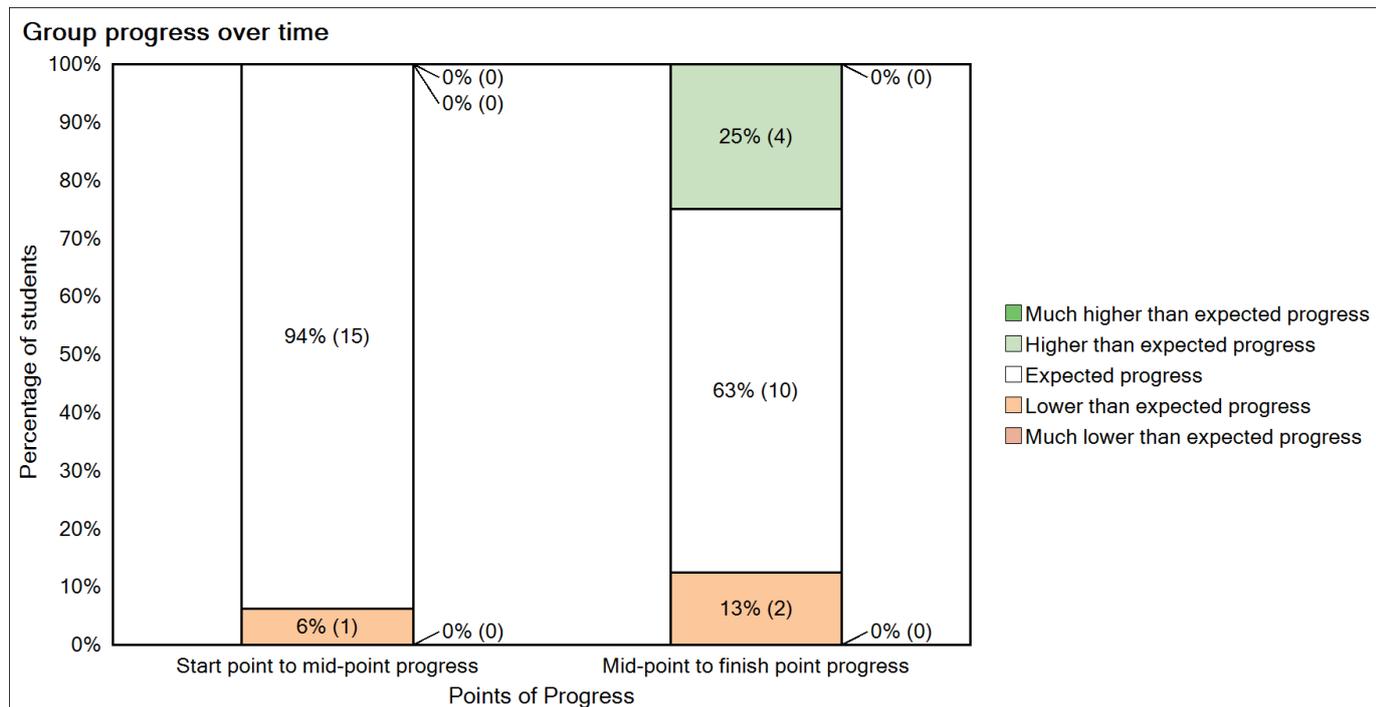

Progress category	National	Group	
	%	%	No. of students
Much higher than expected progress	10%	0%	0
Higher than expected progress	15%	13%	2
Expected progress	50%	81%	13

## Start point to mid-point progress

- 0 pupils (0%) have achieved much higher than expected progress between their start point and mid-point of testing. The UK percentage of children making much higher than expected progress is 10%.
- 0 pupils (0%) have achieved higher than expected progress between their start point and mid-point of testing. The UK percentage of children making higher than expected progress is 15%.
- 15 pupils (94%) have achieved expected progress between their start point and mid-point of testing. The UK percentage of children making expected progress is 50%.
- 1 pupil (6%) has achieved lower than expected progress between their start point and mid-point of testing. The UK percentage of children making lower than expected progress is 15%.
- 0 pupils (0%) have achieved much lower than expected progress between their start point and mid-point of testing. The UK percentage of children making much lower than expected progress is 10%.

## Mid-point to finish point progress

- 0 pupils (0%) have achieved much higher than expected progress between their mid-point and finish point of testing. The UK percentage of children making much higher than expected progress is 10%.
- 4 pupils (25%) have achieved higher than expected progress between their mid-point and finish point of testing. The UK percentage of children making higher than expected progress is 15%.
- 10 pupils (63%) have achieved expected progress between their mid-point and finish point of testing. The UK percentage of children making expected progress is 50%.
- 2 pupils (13%) have achieved lower than expected progress between their mid-point and finish point of testing. The UK percentage of children making lower than expected progress is 15%.
- 0 pupils (0%) have achieved much lower than expected progress between their mid-point and finish point of testing. The UK percentage of children making much lower than expected progress is 10%.
